BONUS DIGITAL EDITION - DETAILS INSIDE!

The year is 2099! Nueva York, the high-flying city built above old New York City, is a place of both technological and superhuman wonders. After an experimental genetic procedure, **MIGUEL O'HARA's** DNA was combined with that of a spider, and Miguel gained powers similar to the original Spider-Man: superhuman strength and durability, poisonous fangs, retractable talons, and the ability to weave organic webbing. Miguel uses his incredible power to protect Nueva York. He is the **SPIDER-MAN** of 2099!

Long ago, alien organisms called **SYMBIOTES** appeared on Earth where they bonded to various super heroes and villains like **SPIDER-MAN** and **VENOM**—increasing and augmenting their powers through this mental, physical, and emotional symbiosis. The **VENOM SYMBIOTE** has been wreaking havoc in Nueva York for some time. But it's not the only symbiote in town.
