Well...  
...nuts.

**Wiccan:** you'd think powers of Wicca, but actually, he's more of a less-specific magic dude! Also he and Hulkling are in loooooove!!

**Hulkling:** you'd think powers of Hulk, but actually, mainly powers of shape-shifting...and of being a cool teen

**Chipmunk Hunk:** powers of chipmunk and hunk

**Hawkeye:** powers of... seeing things from far away? Like a hawk does with its eyes? Also: arrows

**Power Man:** powers of... power, man

**White Tiger:** powers of the tiger spirit

**Squirrel Girl:** powers of squirrel and girl

**Songbird:** powers of song (not in the "a great song can move you emotionally" sense but in the "step up and she will hit you with concussive sound" sense)

5 minutes later...

KKOOCH!!

All our powers combined aren't stopping this thing!

Arrgh!

If we can just find its **weak spots**, a few TNT arrows should--

What "weak spots"? This thing doesn't **have** weak spots!

When are you gonna learn that not every problem in life can be solved by firing **TNT arrows** at it, Hawkeye??

The answer is never. Hawkeye is never going to learn that lesson, probably because he's already invested all that money into TNT arrows and it's not like they do any good just sitting around in the closet.

5 minutes later...

Okay.

So check it out: it's 1918, and there's this supply ship chugging along in the ocean...

"...when it runs into this bunch of islands in the middle of nowhere.

"These islands are isolated, full of animals that don't live anywhere else in the world:

"Birds, insects, lizards, beetles, snails... the works.

aw dang

"But while the crew made repairs, the rats on the ship swam ashore.

We fixed our boat, *plus* we have fewer rats now for some reason!

Sweet!

"It's a disaster.

"The rats eat and eat until there's nothing left. Mass extinctions take place.

R.I.P. TREE LOBSTERS  
IRONICALLY THEY WERE NEITHER TREES NOR LOBSTERS  
which is actually great because trees are boring and lobsters can pinch you sometimes

"Including a species of super-cute leaf-eating bugs called 'tree lobsters'!

"A bunch of islands" is called an "archipelago." IF Squirrel Girl ever Fights a guy who can split into a bunch of smaller guys whenever he gets wet and who is named "Archie Pelago," then you will know precisely where I got my inspiration.

"...or so we thought, until 80 years later when we found 24 of them--all that were left in the universe--huddled beneath a single shrub, half-way up a wall of solid rock 300 feet above sea level.

"And that day, instead of adding a species to the extinction list..."

"...humanity got to take one off."

Scientists collected pairs of tree lobsters, hoping to bring them back from the brink. I know there's research teams working *even now* to breed them in captivity.

Were you one of those tree lobsters born in a lab, sweetie?

And did you get loose and accidentally get exposed to cosmic rays and become giant?

**NOD**

**NOD**

**NOD**

Aw, sweetie. You're probably just hungry, huh?

See? Problem solved, guys!

Tree lobsters are *the cutest*. They pair off in couples and follow each other around, and when they sleep they cuddle up together so that one insect's legs protectively cover the other. They're insects that spoon each other, it's the *cutest*--I love you, tree lobsters!
